FOUNDER

E. J. STEELE

MASTODON STRAINS

Years ago a flower lover found some tiny pansies in three colors. He carefully selected the largest progeny and in time produced one-inch blooms which he called "Giants."

This term is still in use though it long since lost its significance. We decided that Mastodon, meaning huge and rare, would be more appropriate to our immense and unique strains of pansies and this name has come to symbolize the quality which is peculiar to Steele's Mastodon Pansies.

We gave Miracle Mixed to the flower world more than twenty years ago and it is still one of our leading strains, particularly for the market gardener.

We are sole owners of the breeding stock for this strain and no stock offered as Miracle Mix is genuine unless it was grown in our gardens.

Mastodon Jumbo Mixed is our origination and the secret of its production is our most precious asset. Jumbo Mixed cannot be produced from stock seed and the formula for its excellence and the improvement of its color range each year is known only to us. No "re-selected" or other spurious strains of Jumbo are genuine. THERE IS ONLY ONE STEELE'S MASTODON JUMBO MIXED.

Each and Every Strain Listed on This Page Is a Genuine "Steele's Mastodon." See Page One.

Owing to Variations in Soil, Climate, Car and Cultivation, We Are Responsible Only for the Value of the Seed.

Butterfly Hybrids

Rainbow collection of Butterfly Hybrids—Our 1944 offering. The result of 10 years work by Donald, our pansy expert. This strain defies all of our efforts to describe it. The colors are pastels, the center blotches have a magic sheen like that of the wings of rare butterflies. There are flesh pinks with deeper rose edges, buffs overlaid with pink and bordered with orchid, delicate lavenders with mauve blotches, creamy yellows with pink borders, deeper yellows with rich copper blotches and sun-rays on upper petals, pastel reds, orchids, blues and many bright pinks with fuschia centers and rays. Our stock of seed is very limited until main crop in early August. 100 seeds to a customer. \$1.00, postpaid.

Preparing Bed for Germinating Seed

1. Have you soil clean and pulverized to a depth of six or more inches.
2. On the level surface spread evenly a layer of pulverized manure, compost preferred, to depth of at least one inch.
3. Overlay manure with half inch of the best soil you have, thoroughly pulverized.
4. Rake down and tamp surface true and smooth.
5. Soak down the bed several inches.
6. Sow in drills or broadcast.
7. Cover as lightly as possible with your best soil or sand, mixed 50-50 with peat moss.
8. Use spray of water to moisten surface, after light burlap cover is on.
9. Allowing plenty of ventilation, keep your beds moist, quite moist, but not soaking wet, until plants come up.

We use cheapest grade of burlap to retain moisture. As soon as plants begin to come through freely we remove burlap permanently, and sift tops of bed with thin layer of peat moss. To avoid damping off, water young seedling **VERY SPARINGLY**.

Never allow your beds to become dry. Any dryness after seeds sprout is absolutely fatal. These directions are for sowing in the open field, but will apply when using flats or cold frames. **WE USE 125 to 150 SQUARE FEET TO SOW AN OUNCE OF SEED BROADCAST.**

CAUTION—Alternate your pansy crop with some other crop.

THE UNUSUALLY HIGH GERMINATING QUALITIES OF STEELE'S MASTODON PANSY SEED is a revelation to all extensive growers who use our stock.

Owing to uniformity required in producing separate colors, the average size is not equal to the types of flowers found in our mixtures. We strongly advise mixtures for your main crop, and you save money thereby.
